Lull: wellbeing HR can prove, without watching anyone

3-minute guided movement resets for desk-heavy teams, with team-level proof for HR.

One pager · Rupak Ghanpathi
Pilot-stage, India, 50–500 person companies

THE PROBLEM

~30%
of employees take part in company wellness programmes (Plum, 3,500+ Indian orgs, 2023)

~3%
of mental-health app users still active after 30 days (JMIR 2019, 93 apps)

HR buys wellbeing tools that few people use, can't prove the spend worked, and employees avoid anything that feels tracked. Budgets are tight and the founder approves.

THE PRODUCT

- **Employees** type how they feel, in English or Hinglish, and get one three-minute desk reset, seated on a call or standing at the desk.
- **Safety first:** pain or urgent symptoms stop the session and point to proper help, before or during it.
- **Coming back:** opt-in reminders on their own calendar or Slack; one tap to "your usual"; team resets at the end of meetings.
- **HR** sees team totals, broad need categories and a week-6 report with cost per finished session.

PRIVACY BY DESIGN

- Team totals only; teams under 10 hidden (and a second team if one could be worked out by subtraction).
- One tested allow-list of anonymous counts; never names, device IDs, typed text or pain reports.
- Each employee sees exactly what was sent, and can switch it off.

THE PILOT OFFER

Scope	Targets (agreed before day one)	Price and terms
One team of 10–50, 6 weeks; check-in at week 3, report at week 6	≥ half the team tries it · ≥ 1 in 3 come back within a week · more "Lighter" than "Not for me" · every pain report ends the session	₹60–120 per person per month, indicative · nothing new to log into · no annual contract · physio review before any paid pilot

WHAT IS BUILT

- Working app (runs in the browser, no AI by default), HR site with a live 40-second try-it and feedback funnel, PM case study, privacy pillars, pilot calculator, launch kit, sample week-6 readout.
- 89 automated tests, all passing, including the privacy contract and Hinglish safety words.

NEXT STEPS

- Personalised outreach to 10–20 HR leads; measure opens, demo use and section reached.
- Physiotherapist review; data-handling note; first 3 pilot partners.
